

Making outdated devices work for your business

The devices used in your business are indispensable. But what happens when they reach end of life or are out of warranty? Managed properly, your outdated devices can still deliver value to your business.

1. Determine which devices are ready for replacement

out-of-warranty devices could start costing you money

slower devices compromise productivity

top talent demands new technology

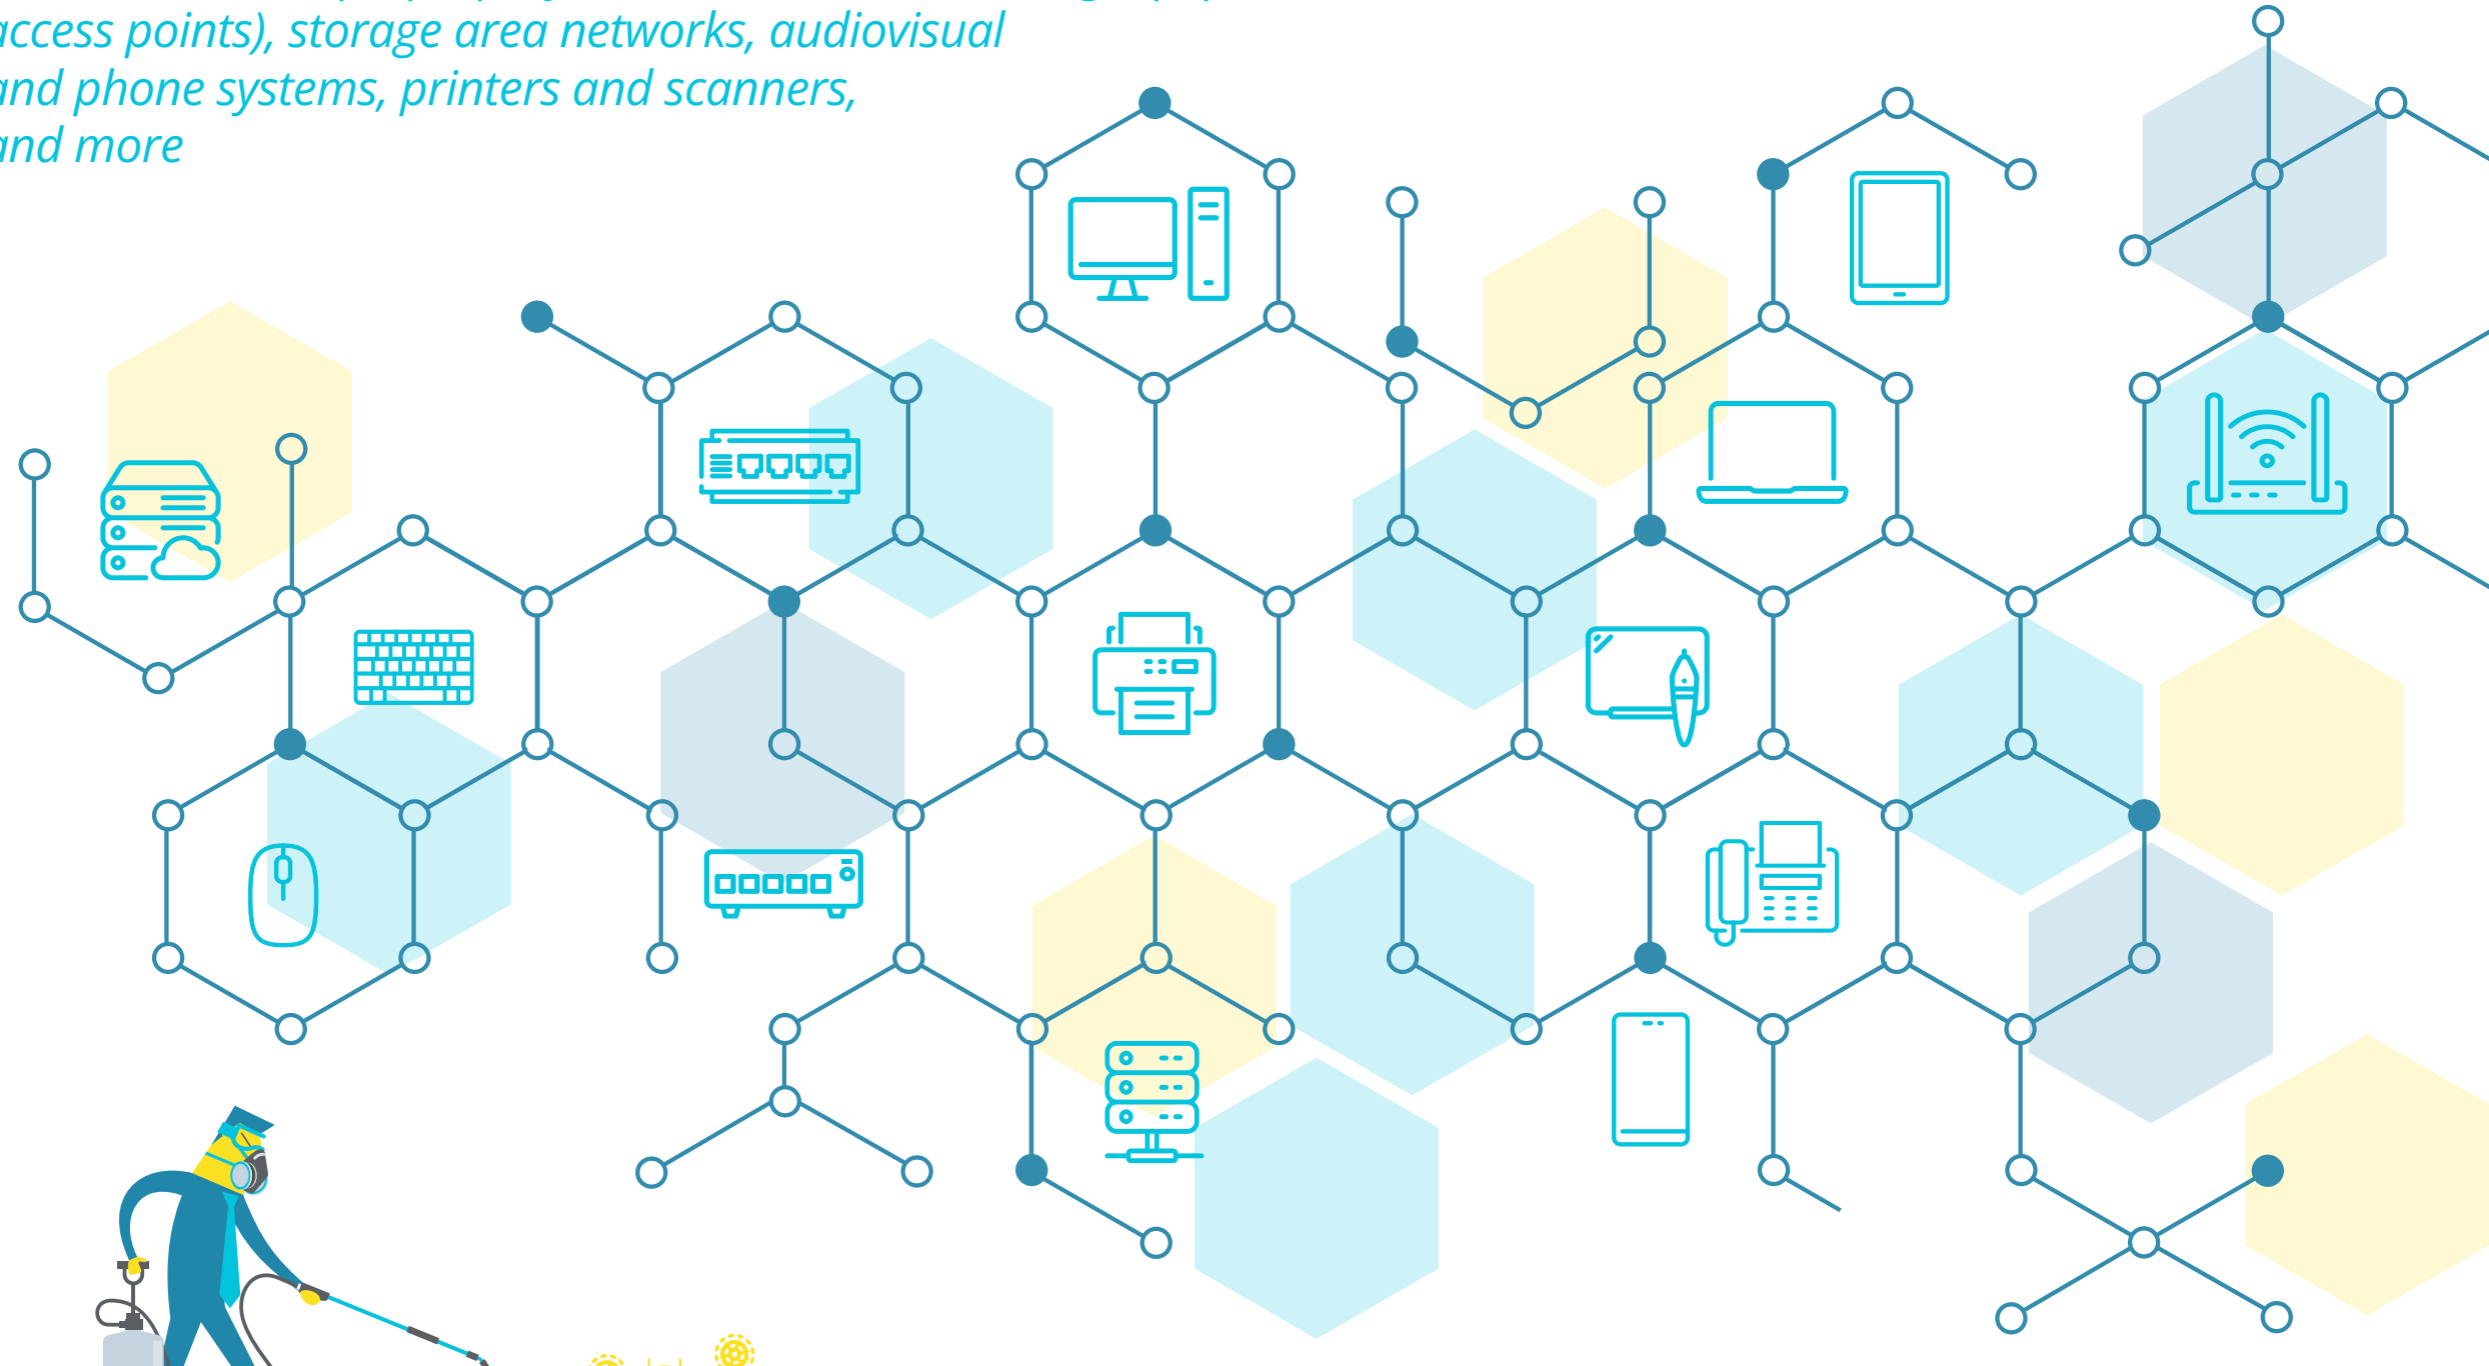

2. Contact **Blue Connections** to manage the asset recovery process

3. **Blue Connections** picks up your devices from your site

4. We are a one-stop-shop for all your devices

Mobile devices, laptops, projectors, servers, networking equipment (switches, routers, access points), storage area networks, audiovisual and phone systems, printers and scanners, and more

Don't use freeware to sanitise data

5. We securely sanitise all data from your devices with certification

We provide **certification** and audit tracking

6. We handle eWaste responsibly

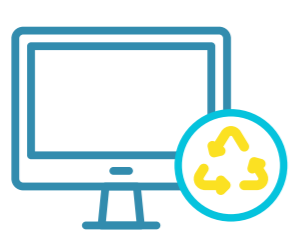

You avoid data and **security** breaches

You minimise **environmental** damage

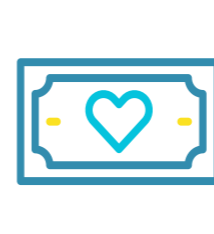

7. Blue Connections can then:

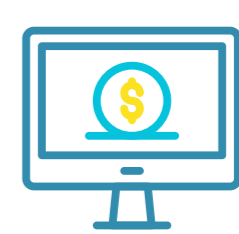

refurbish usable equipment and **redistribute** it in your business

donate refurbished equipment to a **charity** of your choice

sell the refurbished equipment and **donate** those funds to a **charity** of your choice

sell the refurbished equipment and **provide** those funds to your business

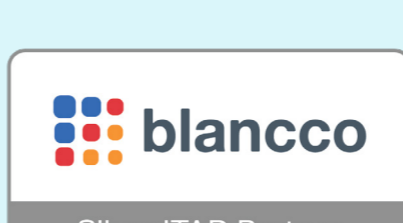

8. Corporate social responsibility has never been more cost effective

Managing outdated devices yourself can be a recipe for disaster. Don't risk data breaches or inappropriate eWaste treatment.

Let Blue Connections manage this process from end to end so you know it's been done according to best practices and your business is covered.
